JANUARY 1961
Volume 65 No. 1

ASHEVILLE: 1961

January 1961 was another very dry month. Totals for the period ranged from 58 percent of normal along the North Coast and 55 on the Central Coast through about 50 in the Sacramento and San Joaquin Drainages to as little as 28 in the Southeast Desert Basins and 21 percent in the Northeast Interior Basins. Temperatures averaged above normal over the entire State, with positive departures of more than 5° in the Northeast Interior Basins and in the South Coast Drainage. The average value for the South Coast Drainage was about that normally experienced around April 1. The picture was not uniform, however, for there were a few scattered stations in all areas except these two that reported negative departures for the month.

STORMS

The principal storm damage during the month was along the coastlines of Orange and Ventura Counties, where high tides and strong winds on the 14th through the 18th resulted in considerable property damage to homes, roadways and commercial property near the beach. The greatest damage appeared to be concentrated in the vicinity of Surfside and Ventura.

C. Robert Elford
Weather Bureau State Climatologist
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 90° on the 16th at Tustin Irvine Ranch and on the 18th+ at San Gabriel Fire Department and Yorba Linda.

Lowest Temperature -5° on the 28th at White Mountain 1.

Greatest Total Precipitation 17.57 inches at Honeydew 2 WSW.

Least Total Precipitation 0.00 at Eagle Mountain.

Greatest One-day Precipitation 9.35 inches on the 31st at Honeydew 2 WSW.

Greatest Total Snowfall 64.5 inches at Mount Shasta Ski Bowl.

Deepest Snow on Ground 117 inches on the 31st at Mount Shasta Ski Bowl.

MAXIMUM AND MINIMUM IN ABOVE TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.
(a) EVAPORATION PAN IS OF SHEET COPPER, PAINTED.
(b) EVAPORATION PAN IS OF STAINLESS STEEL, UNPAINTED.
(c) EVAPORATION PAN MADE OF STEEL PLATE, PAINTED WITH ALUMINUM INSIDE AND OUT, MOUNTED ON PLATFORM ABOUT 10 INCHES ABOVE GROUND.
ø PRORATED TO PRESERVE MONTHLY TOTAL.

See reference notes following Station Index.

(b) SANDY LOAM -- UNDER BARE GROUND SURFACE. DATA FROM ADOLPH FRESE SOIL THERMOGRAPH.
(c) RAMONA SANDY LOAM. DATA FROM FRIEZ AIR AND SOIL THERMOGRAPH. EQUIPMENT AT THE 12-INCH DEPTH MOVED 0.5 MILE SW TO A NON-IRRIGATED AREA ON MAY 1, 1960.
(d) RAMONA SANDY LOAM -- UNDER THE EAST SKIRT OF A VALENCIA ORANGE TREE, SHADED AND UNDER REGULARLY IRRIGATED SOIL. IRRIGATION WATER ON 18-INCH DEPTH 8:00 A.M. JANUARY 9 TO 8:00 A.M. JANUARY 11 (48 HOURS). DATA FROM FRIEZ AIR AND SOIL THERMOGRAPH.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

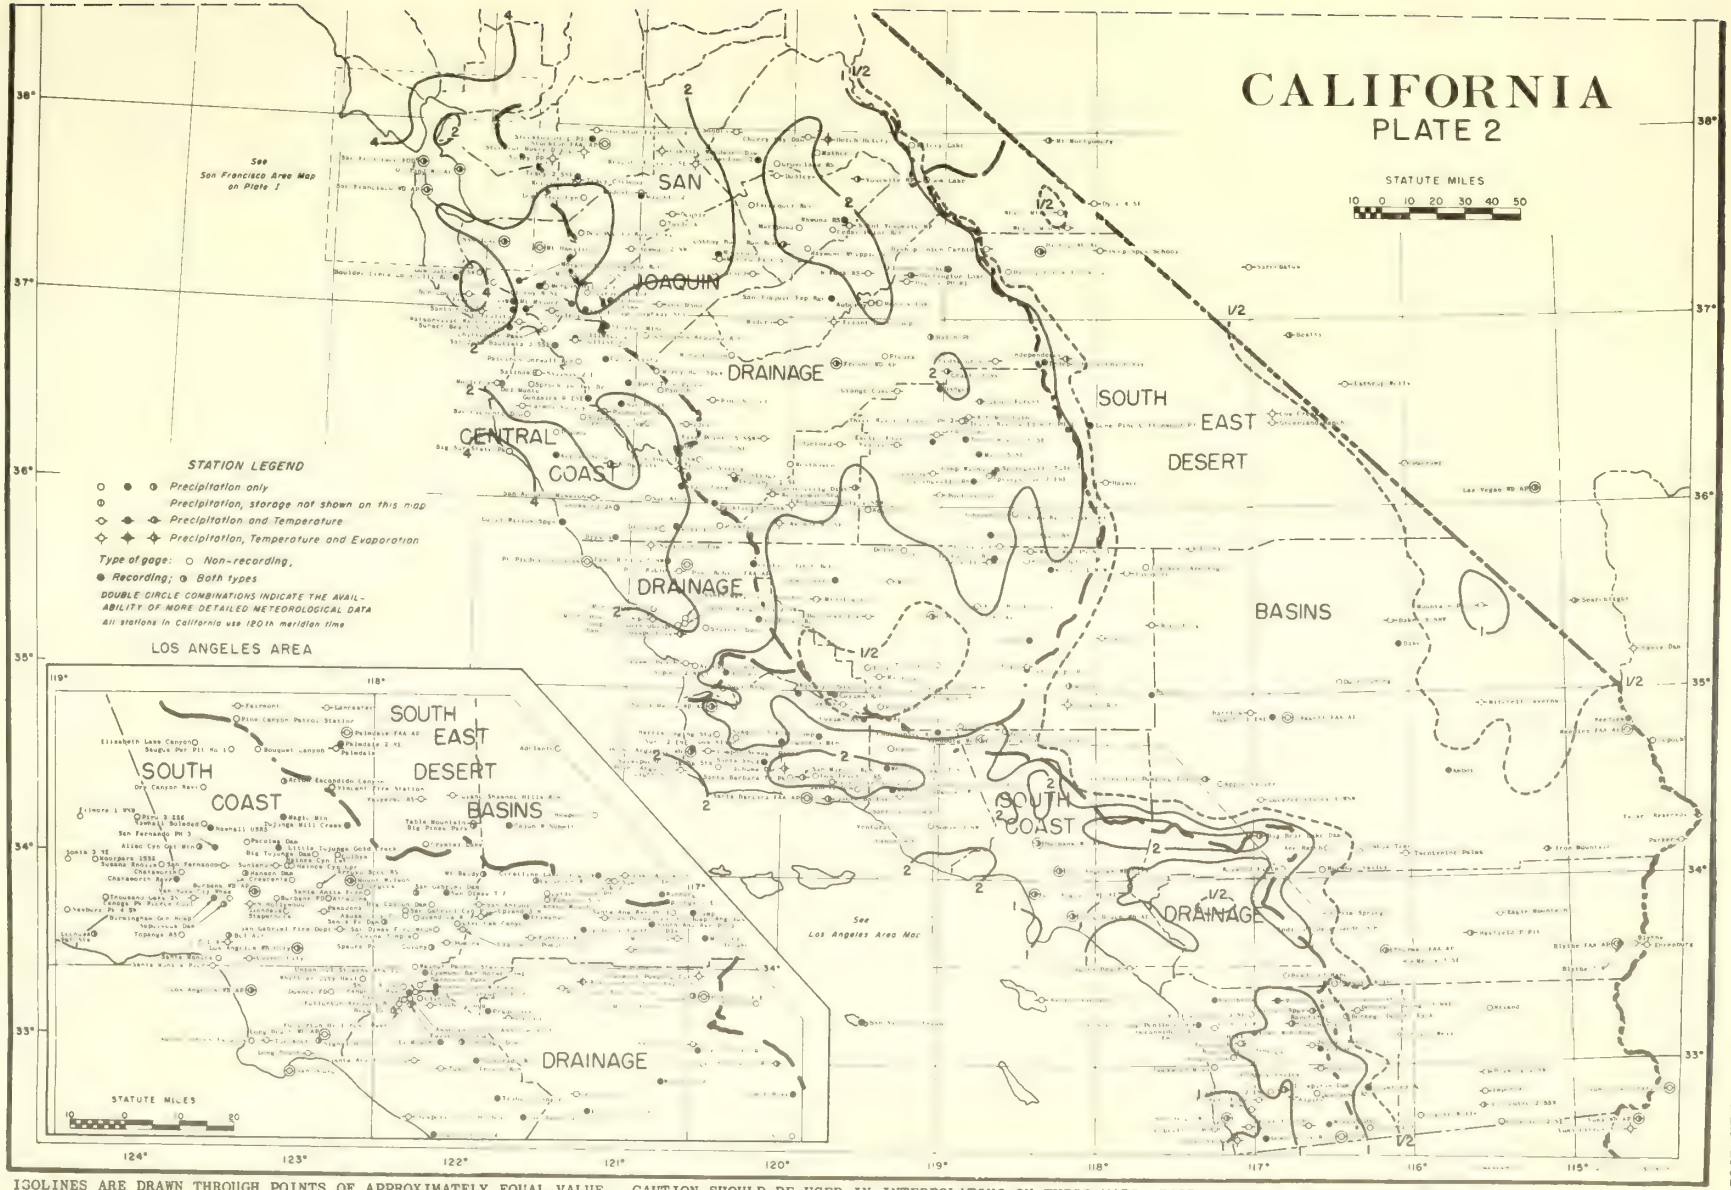
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

FEBRUARY 1961
Volume 65 No. 2

GOVERNMENT PUBLICATIONS
APR 11 1961
CLEMSON LIBRARY

ASHEVILLE: 1961

February was warm and dry over most of California. Mean temperatures for the various divisions averaged from 2.5° to more than 6° above normal, with only a few isolated points reporting subnormal monthly means. The greatest excesses were found in the northeast corner of the State, with some stations reporting averages as much as 7° above normal. Burbank reported the second warmest February of record, and Sacramento measured a maximum reading of 72° on the 21st, to equal the all-time record for that date.

Precipitation, on the other hand, was below normal over the entire State except for the North Coast Drainage, which was above normal. Negative departures of the several divisions ranged up to 3.3 inches in the South Coast Drainage. Both Burbank and Los Angeles reported the second driest February of record, and Sacramento experienced the driest February since 1953. At Norden there was only 13 inches of snow on the ground at the end of the month. This was the lightest snow cover for late February at that point since records were started in 1898.

Burbank reported that the three-month period December through February was the warmest and driest such period in the records.

STORMS

Heavy rains during the period from the 11th through the 14th resulted in numerous landslides in the north coast area. One slide of 500,000 cubic yards of earth closed U.S. Highway No. 101 for almost a week. Strong winds in parts of southern California capsized a number of small boats and drove others ashore, downed trees and utility lines, and sandblasted automobiles. One person was killed when a tree was blown down on a parked car; other persons were injured by flying debris.

C. Robert Elford
Weather Bureau State Climatologist
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 89° on the 22d at Indio U S Date Garden.

Lowest Temperature -3° on the 17th at White Mountain #1 and on the 23d at White Mountain #

Greatest Total Precipitation 24.47 inches at Honeydew 2 WSW.

Least Total Precipitation 0.00 at 105 stations.

Greatest One-day Precipitation 9.78 inches on the 11th at Honeydew 2 WSW.

Greatest Total Snowfall 76.0 inches at Mount Shasta Ski Bowl.

Deepest Snow on Ground 138 inches on the 14th+ at Mount Shasta Ski Bowl.

MAXIMUM AND MINIMUM IN ABOVE TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.
(a) EVAPORATION PAN IS OF SHEET COPPER, PAINTED.
(b) EVAPORATION PAN IS OF STAINLESS STEEL, UNPAINTED.
(c) EVAPORATION PAN MADE OF STEEL PLATE, PAINTED WITH ALUMINUM INSIDE AND OUT, MOUNTED ON PLATFORM ABOUT 10 INCHES ABOVE GROUND.
ø PRORATED TO PRESERVE MONTHLY TOTAL.

See reference notes following Station Index.

(a) HOLTVILLE SILTY CLAY, BARE GROUND, EXPOSED TO SUN, FLAT SURFACE WITH NO SLOPE. MAXIMUM AND MINIMUM READINGS ARE FROM INSTRUMENTS CORPORATION THERMOGRAPH MADE AT 9:00 A.M. COVERING PREVIOUS 24 HOURS. 9:00 A.M. READINGS ARE FROM H. J. GREEN MERCURY-IN-GLASS THERMOMETERS.
(b) SANDY LOAM -- UNDER BARE GROUND SURFACE. DATA FROM ADOLPH FRESE SOIL THERMOGRAPH.
(c) RAMONA SANDY LOAM. DATA FROM FRIEZ AIR AND SOIL THERMOGRAPH.
(d) RAMONA SANDY LOAM -- UNDER THE EAST SKIRT OF A VALENCIA ORANGE TREE, SHADED AND UNDER REGULARLY IRRIGATED SOIL. IRRIGATION WATER ON 18-INCH DEPTH 8:00 A.M. FEBRUARY 6 TO 8:00 A.M. FEBRUARY 8 (48 HOURS). DATA FROM FRIEZ AIR AND SOIL THERMOGRAPH.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

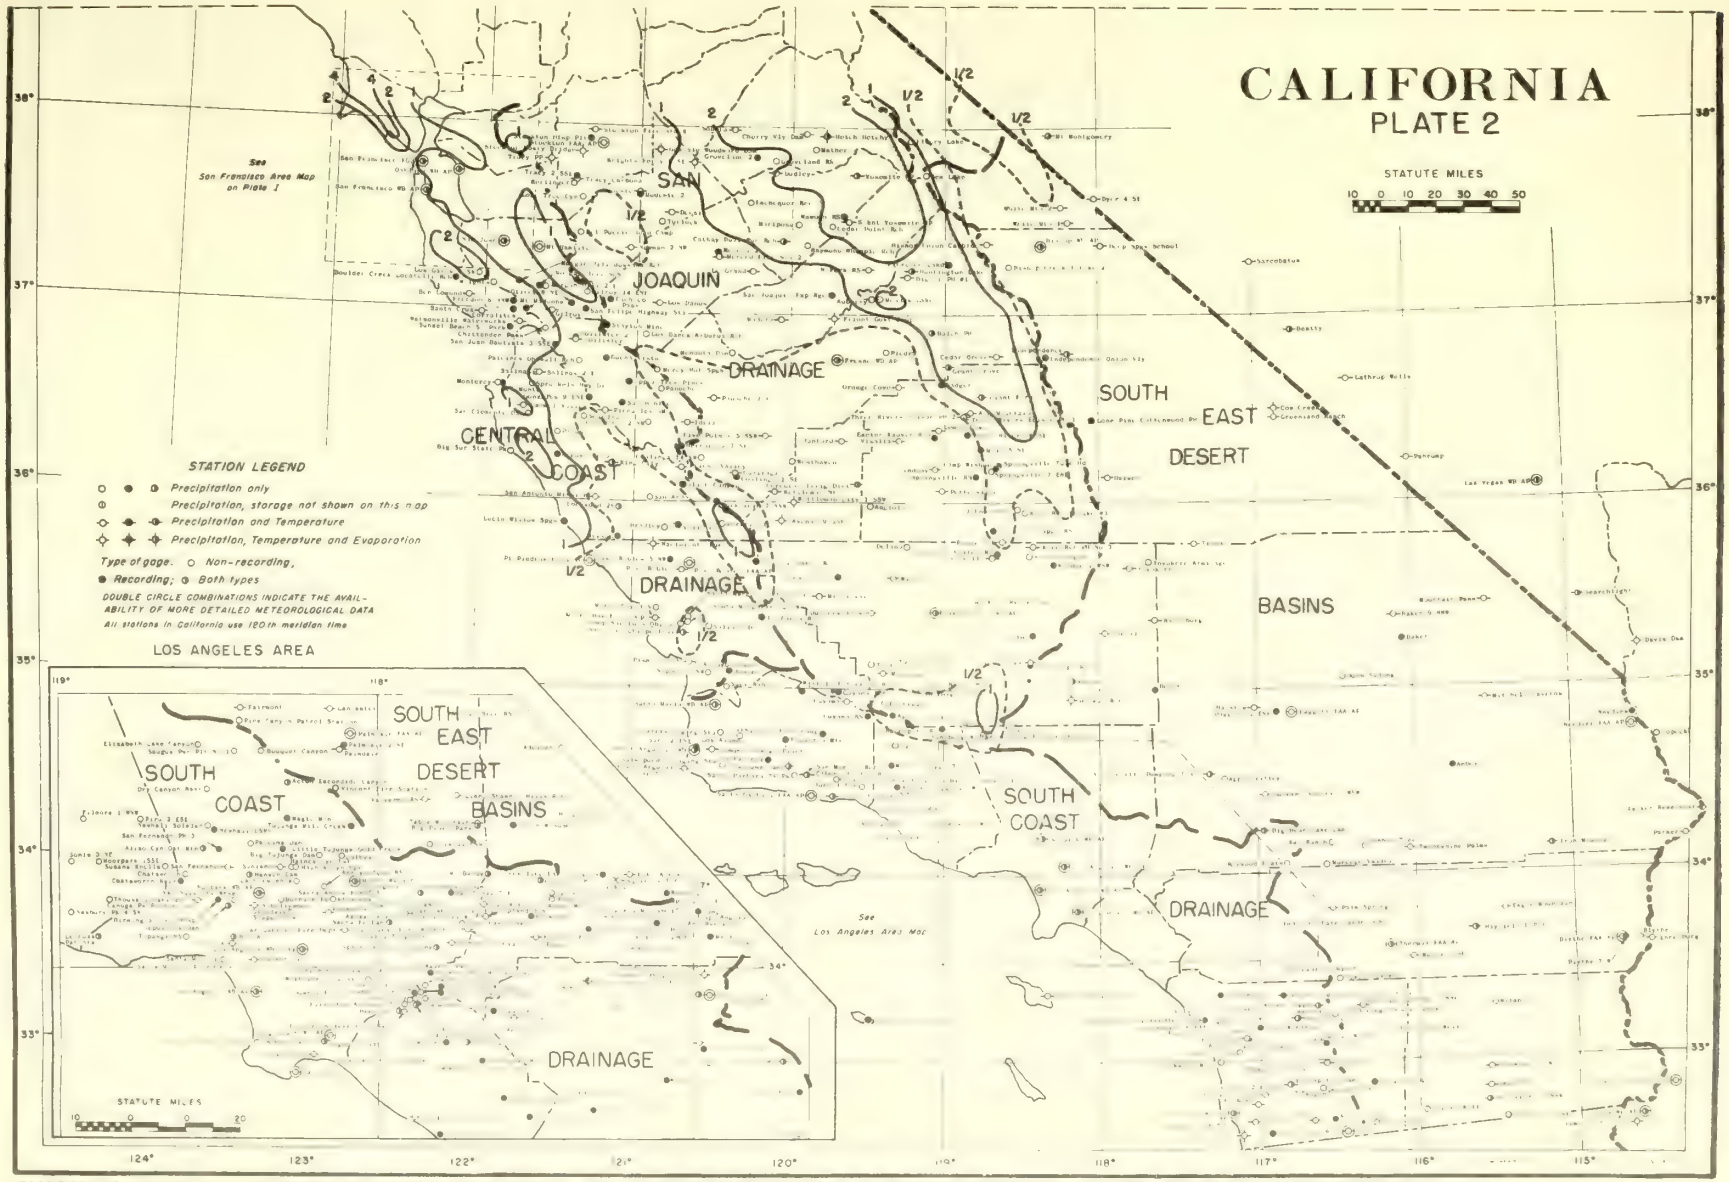
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

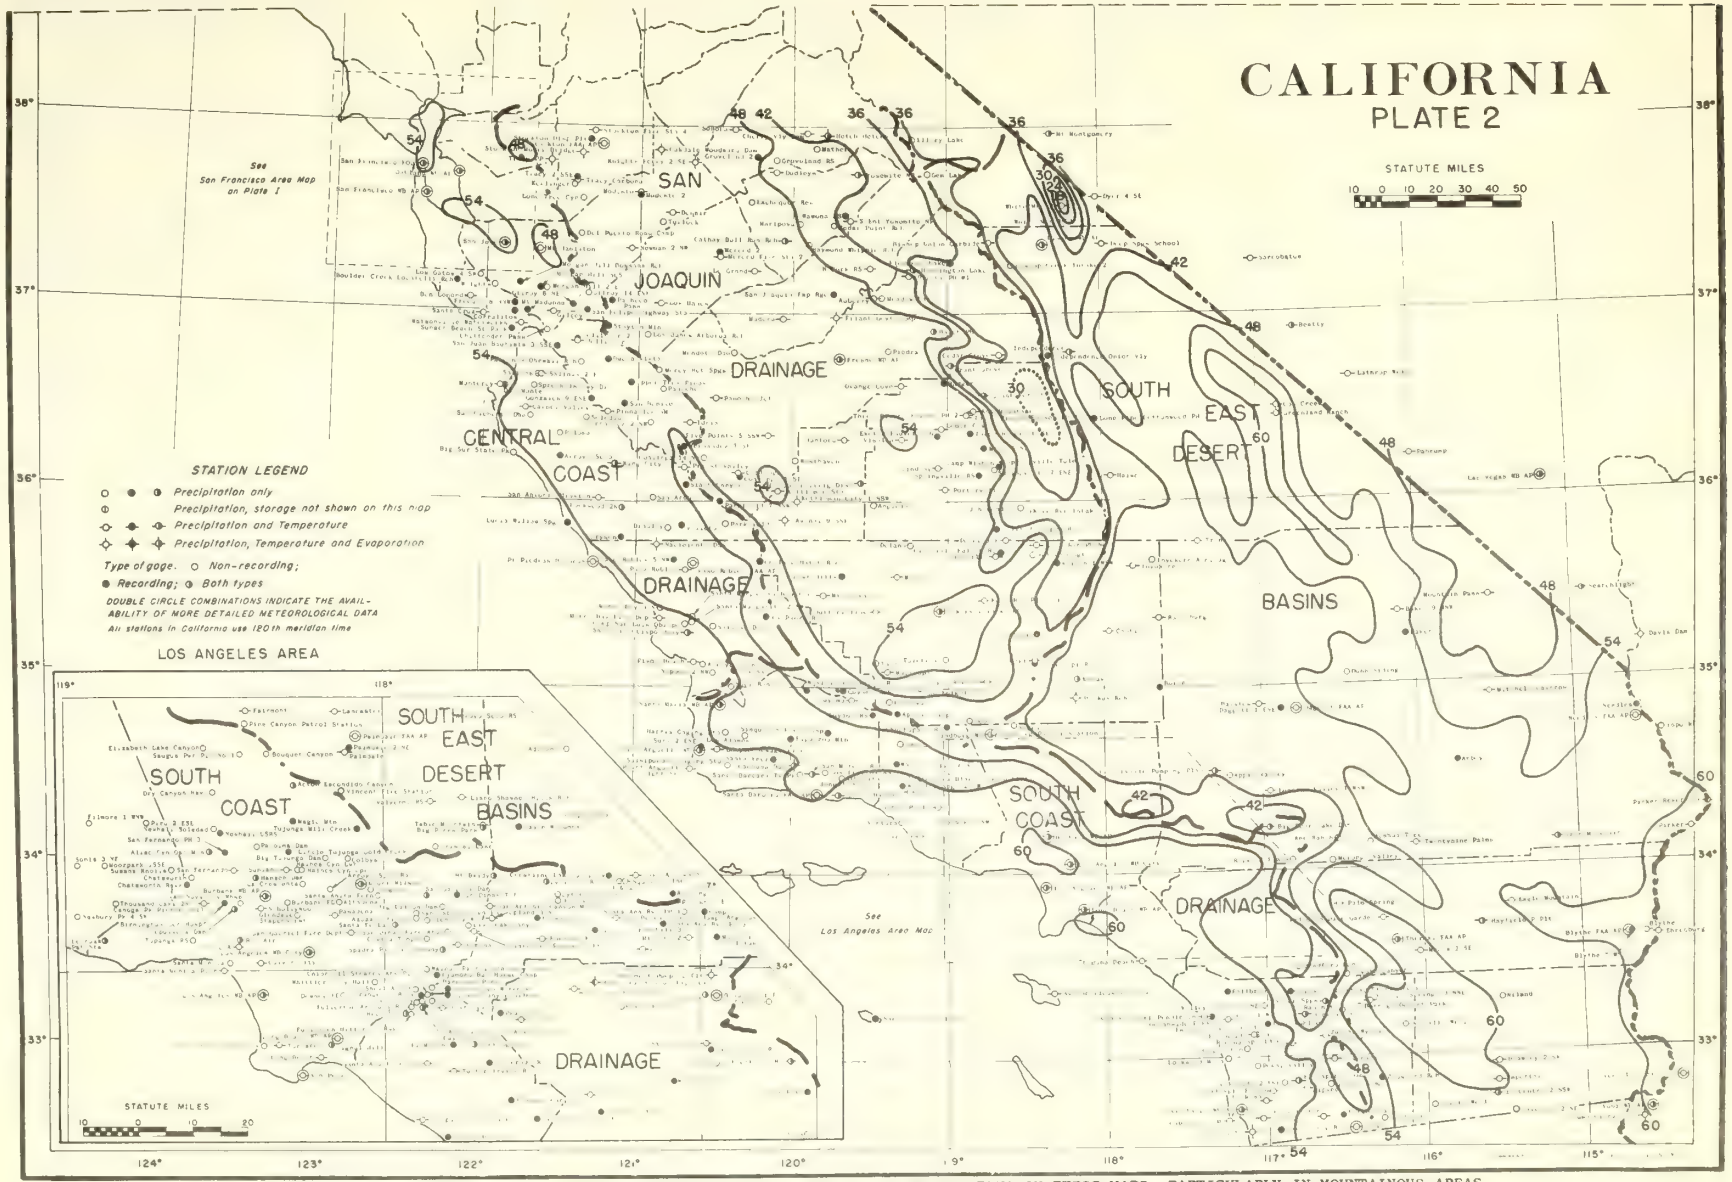
V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.



Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

MARCH 1961
Volume 65 No. 3

ASHEVILLE: 1961

The month of March 1961 was generally drier than normal, except for the north coast area, and temperatures were above normal east of the Sierras and south of the Tehachapis and below normal elsewhere.

Precipitation: With the exception of the North Coast Drainage all of the State has had deficient precipitation through most of the season. Of the nine months since July 1 only November had significantly above normal precipitation totals. On the north coast, however, both February and March, as well as November, had more precipitation than normal. In spite of these periods of generous moisture the seasonal total since July 1 is still below normal for this division as well as for the rest of the State. The deficiency now amounts to 40 to 60 percent of normal in the Central and South Coast and San Joaquin Drainages and the Desert Basins. In the south, San Diego has received only 3.45 inches of precipitation since July 1, the fifth smallest total on record.

During March Mt. Shasta City, in the northern part of the State, received more than three times as much snow as they had received in the months of December, January, and February combined, but their snowfall was still far short of the record fall of March 1904. Since that time there have been seven years in which March snowfall was greater than that received this year.

Temperature: Temperatures continued abo normal during March in the northeast interio the southeastern desert basins, and the sou coast. Over the rest of the State, however, t above normal trend of January and February w reversed, and temperatures averaged near or b low normal during March.

Storms: Local wind damage was reported in t Palm Springs - Mojave areas on the 3d. Hail fe on the 5th in the vicinity of Red Bluff. Ra around the 14th of the month resulted in la slides that closed the coast highway in the v cinity of Pacifica. They also resulted in flooding of a part of Highway 101 in the vicin of Willits where temporary repairs to earl flooding provided inadequate drainage facilit Winds over much of the State on the 16th and 1 damaged utility lines and buildings in many pa of the State. Wave action caused some damage the Santa Cruz area. Highways were closed southern California and damage was reported that area from sand blasting. Wind on the 2 resulted in the sinking of three fishing bo near the mouth of the Noyo River, but there no loss of life.

(a) EVAPORATION PAN IS OF SHEET COPPER, PAINTED.
(b) EVAPORATION PAN IS OF STAINLESS STEEL, UNPAINTED.
(c) EVAPORATION PAN MADE OF STEEL PLATE, PAINTED WITH ALUMINUM INSIDE AND OUT, MOUNTED ON PLATFORM ABOUT 10 INCHES ABOVE GROUND.
ø PRORATED TO PRESERVE MONTHLY TOTAL.
MAXIMUM AND MINIMUM IN ABOVE TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

APRIL 1961
Volume 65 No. 4

ASHEVILLE: 1961

Precipitation. April precipitation averaged substantially below normal over all of the State except the Northeast Interior Basins, where there was a small excess over normal. The month's moisture amounted to only 10 percent of normal on the south coast, increasing to near 50 percent over most of the central portion and to 75 percent to 100 percent over the extreme north. San Diego received only a trace of precipitation during the month, to make this the driest April since 1918. Their seasonal total since July 1, 1960, 3.45 inches, is the second smallest amount on record; the smallest was 3.32 in 1876-77. In the north portion of the State monthly totals have been below normal for 7 of the last 10 months, while the rest of the State has had deficient rainfall in 8 or 9 of the past 10 months.

It appears that the snow pack at the end of the month was near normal in the north coastal area, but the moisture supply held in the form of snow was only 55 percent of normal in the mountains draining into the Sacramento Valley and decreased to around 20 percent in the uplands of the San Joaquin drainage. This appears to be the lowest moisture supply in the San Joaquin area since 1931.

Temperature. Temperatures averaged well above normal in all divisions of the State. At the same time, however, there were some abnormally cold spells during the month. At Sacramento new high temperature records were established on the 2d and 3d, while minimums on the 3d and 4th were the warmest ever recorded for those dates. By contrast the maximum of the 22d was the lowest ever recorded on that date, and the minimum of the 24th equalled the record low for the date. Fresno reported a maximum of 91° on the 3d, the highest temperature ever recorded so early in the season. Santa Maria had a low of 33° on the 20th to equal the lowest ever recorded so late in the season. Warm night temperatures were equalled or exceeded at Red Bluff on the 2d, 3d, 4th, and 5th, while minimum records were equalled or exceeded on the 19th, 22d, and 24th.

Frosts. Frost or freezing temperatures moved into the northern part of the State on the morning of the 18th, and for the next several mornings struck viciously at various points throughout the State. In some local areas this year's fruit crops and grapes were completely wiped out while in other locations but a short distance away the loss was lighter or was even non-existent. Some of the crops had been more advanced than usual because of warm weather the first part of the month.

Storms. Associated with the advancing cold air of the 18th to the 25th were strong winds and some lightning, particularly in the central and southern portions of the State. Damage resulted to utility lines, display signs, and boats. A wind of 50 m.p.h. at Red Bluff on the 21st was the fastest of record for April. Intense showers fell on the 6th, 22d, and 23d in the northern part of the State, with hail being reported at a few locations. Local flooding resulted from heavy showers in limited areas. Heavy snow in the Shasta area, beginning on the 21st resulted in considerable damage to blooming trees and shrubs.

C. Robert Elford
Weather Bureau State Climatologist
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 108° on the 3d at Cow Creek and on the 4th at Indio U.S.Date Garden.

Lowest Temperature -4° on the 24th+ at White Mountain 2.

Greatest Total Precipitation 7.30 inches at Orick 10 SE.

Least Total Precipitation 0.00 at 51 stations.

Greatest One-day Precipitation 2.53 inches on the 21st at Orick 10 SE.

Greatest Total Snowfall 49.0 inches at Snow Laboratory Central Sierra.

Deepest Snow on Ground 157 inches on the 1st at Mount Shasta Ski Bowl.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

MAY 1961
Volume 65 No. 5

ASHEVILLE: 1961

Precipitation averaged near or above normal over all of the State north of the Tehachapis, but the area to the south of that line received only one-quarter to one-third of normal. November was the last previous month with above normal precipitation from the Sacramento Valley southward, while greater than normal amounts were recorded during some of the spring months in the extreme north. Of the 35 months since July 1, 1958, precipitation has been below normal from 20 times in the northeast interior to 30 times on the south coast. The rains in May over the northern half of the State prolonged the growing season in dry farming areas and reduced early season water demands in irrigation areas.

Temperatures averaged below normal in all parts of the State, with departures in excess of 3° in the central valley and the desert areas. Frost damaged fruit trees in the McCloud area during the first week of the month. Red Bluff experienced only five days during the month with above normal temperatures; they also reported the highest average wind of any May on record. Only once before, since records were begun in Sacramento in 1878, has the May maximum temperature at that station been lower. A minimum of 43° on the 5th equalled the lowest minimum temperature for that date, a record set in 1919. Fresno reported the coldest May since 1953, and only the secor May on record in which the temperature did nc reach 90°. At Santa Maria this was the coldes May since 1943; they had 25 percent more wir than usual. At the airport in Los Angeles ther were only two days during the entire month wit above normal temperatures. On the other hanc Burbank reported that this was the first May i their records without a minimum reading below 5(A wind of 31 m.p.h. on the 12th was the fastes ever recorded at Burbank in May.

STORMS

Blowing sand on the afternoon of the 3d close highways in Riverside County, removed paint fr buildings and vehicles, and damaged some fruit A thunderstorm in the area just northeast of Sa ramento on the 12th resulted in some hail dama to crops and lightning damage to electrical di tribution equipment.

C. Robert Elford
Weather Bureau State Climatologist
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 104° on the 1st at Blythe FAA Airport, on the 2d at Indio US Date Garden, and on the 26th+ at Death Valley.

Lowest Temperature 3° on the 12th at White Mountain 2.

Greatest Total Precipitation 10.01 inches at Gasquet Ranger Station.

Least Total Precipitation 0.00 at 81 stations.

Greatest One-day Precipitation 2.32 inches on the 11th at Branscomb 2 NW.

Greatest Total Snowfall 36.0 inches at Mount Shasta Ski Bowl.

Deepest Snow on Ground 130 inches on the 12th+ at Mount Shasta Ski Bowl.

(a) EVAPORATION PAN IS OF SHEET COPPER, PAINTED.
(b) EVAPORATION PAN IS OF STAINLESS STEEL, UNPAINTED.
(c) EVAPORATION PAN MADE OF STEEL PLATE, PAINTED WITH ALUMINUM INSIDE AND OUT, MOUNTED ON PLATFORM ABOUT 10 INCHES ABOVE GROUND.
MAXIMUM AND MINIMUM IN ABOVE TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.
ø PRORATED TO PRESERVE MONTHLY TOTAL.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

CLIMATOLOGICAL DATA

CALIFORNIA

JUNE 1961
Volume 65 No. 6

ASHEVILLE: 1961

Precipitation: Only the Northeast Interior Basin received precipitation during June that was near normal; all other areas were deficient in moisture. Of the 560 stations reporting, 227 reported no rainfall whatsoever.

Seasonal precipitation for the 12 months ending in June was greater than normal in the area north and west of Red Bluff and in a few local areas of the Southeast Desert Basins. Alturas, in the northeast, received only 66 percent of normal; only 1 year in 14 can be expected to be this dry. Precipitation in Sacramento amounted to 83 percent of normal. Salinas received only 57 percent of the seasonal normal; only 1 year in 25 can be expected to be this dry. The Los Angeles total was only 33 percent of normal, and here, too, precipitation this light can be expected to occur only 1 year in 25. Burbank reported the lowest seasonal precipitation total of record. Their total for the past 36 months was only 23.43 inches, compared with a normal of 41.64 inches for that period. Los Angeles had the driest season of record, 4.48 inches against a normal of 12.37 inches. San Diego, too, had the driest season of record and the driest three-year seasonal period of record, 3.46 total for the past 12 months, and 16.19 for the past 36 months, against a 36-month normal of 32.58 inches.

Temperature: Over most of the State this was one of the warmest Junes of record, though it was exceeded at some points in 1960. In the Northeast Interior Basins this month was even warmer than the same month last year. Departures from normal in the several drainage areas ranged from +2.8° on the South Coast to +6.5° in the Northeast Interior. New records were set at many points; the following examples from first-order station tabulations are typical. Red Bluff set new maximum temperature records for the 14th, 15th, 16th, and 20th and new records for warm minimums on the 15th, 17th, and 25th. A reading of 113° on the 15th is the highest ever recorded so early in the season, and maxima of 102° or higher on 14 consecutive days set a new record for June. At Sacramento new maximum records were established on the 14th, 15th, 16th, and 21st, and new high minimum records on the 14th and 15th and the previous high minimum equalled on the 16th. Temperatures of 100° or higher were recorded on 8 days, against a previous June high of only 3 days.

San Francisco Airport measured 106° on the 14th, to set a new all-time high record. New record high readings were noted at Fresno on the 15th, 16th, and 21st, and previous readings were equalled on the 14th. Bakersfield set a new high record for June with 113° on the 15th and 16th and a new record high minimum for any month of 84° on the 25th. At Sandberg there were 19 consecutive days with above normal temperature, with the departure amounting to 23° on the 15th and 16th.

Hot Weather Damage: Abnormally high temperatures from the 13th through the 17th in central California burned fruit and vegetable crops, resulting in direct losses estimated at several millions of dollars and indirect losses equally as great.

C. Robert Elford
Weather Bureau State Climatologist
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 125° on the 21st+ at Death Valley.

Lowest Temperature 11° on the 1st at White Mountain 2.

Greatest Total Precipitation 2.06 inches at Davis Creek.

Least Total Precipitation 0.00 at 227 stations.

Greatest One-day Precipitation 1.42 inches on the 2d at Mount Hebron Ranger Station.

Greatest Total Snowfall 8.0 inches at Bishop Union Carbide.

Deepest Snow on Ground 100 inches on the 1st at Mount Shasta Ski Bowl.

CORRECTED DATA

FEBRUARY 1960	SAN MATEO	Precipitation on 1st should be 1.22, 2d, .05, 3d, .20, 4th, .02; and .08 on 19th should be on 18th. Monthly total should be 5.71.
DECEMBER 1960	INDIO U S DATE GARDEN	Min temperature on 8th should be 39 and 11th, 35. Mean min should be 38.3 and degree day total 293
	SANDBERG PATROL STATION FC 140 B	Precipitation on 1st should be .03; 2d, .03; and monthly total .11.
ANNUAL 1960	ALAMO 1 N	Relocation of equipment on January 19 1960 was indicated as being moved 1-1/2 miles SSE but the distance should have been 0.15 mile SSE.
FEBRUARY 1961	TAHOE CITY	Delete record for entire month. See Delayed Data of the issue for corrected data.
MARCH 1961	LAKE SPAULDING	Precipitation on 2d should be .20, monthly total 9.50, departure +.04, and days with .10 or more 17
	MIDDLEWATER	Precipitation on 28th should be .09, monthly total .53, and departure -.22.
	MOUNTAIN PASS	Min temperature on 26th should be 28.
	WARNER SPRINGS	Delete record for entire month. See Delayed Data of this issue for corrected data.
APRIL 1961	CUYAMACA	Delete max and min temperatures for period 1st through 12th, should be no record
	MIDDLETOWN	Precipitation on 29th, 30th, and monthly total should be (*) accumulation.
	STOCKTON MOWRY BRIDGE	Evaporation on 30th should be missing and monthly total 86.79. Wind movement on 30th should be 15 and monthly total 1260.
MAY 1961	BISHOP CREEK INTAKE 2	Precipitation on 7th should be .00; 29th, .03; 30th, .02; 31st, .12; and monthly total .20
	LAKE SPAULDING	Precipitation on 31st should be .22, monthly total 4.53, departure +1.19, and days with .10 or more 8.
	LAKE SPAULDING DAM	Delete record for entire month. See Delayed Data of this issue for corrected data.

See Reference Notes Following Station Index

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal precipitation, for the preceding 12 months are carried in the June issues of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

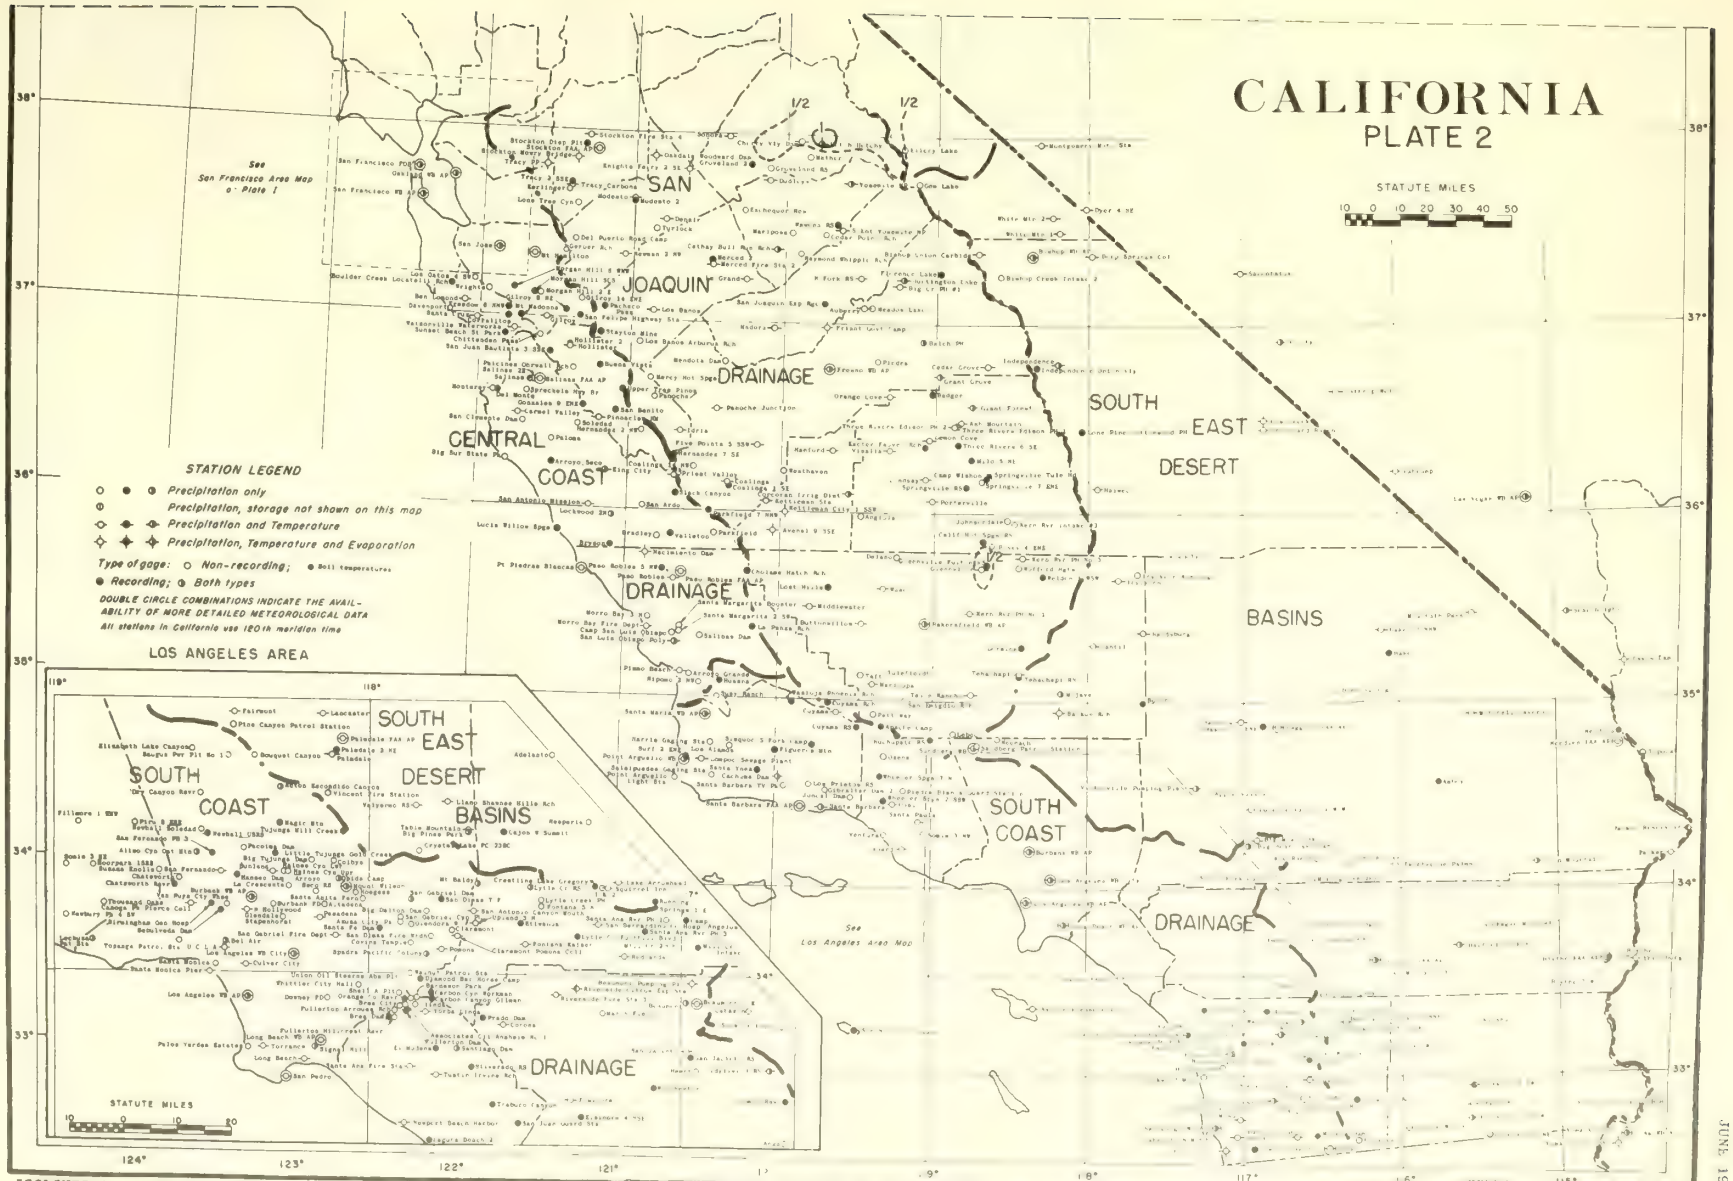
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

JULY 1961
Volume 65 No. 7

CLEMSON COLLEGE LIBRARY
SEP 20 1961
AGRI. REF. DEPT.

ASHEVILLE: 1961

Temperature: For the second consecutive month most of the State was warmer and drier than normal. The only exception was in the San Joaquin Valley where some light showers brought the division average to 0.07 inch of precipitation for the month, an excess of 0.04 inch over normal. At Red Bluff new high temperature records were set for the 10th and 11th, and the previous record was equalled on the 12th. There were 11 days of 109° or higher in June and July, setting a new record for such warm weather. At Sacramento new high temperature records were set on the 10th, 11th, and 18th, and a high minimum record was set on the 19th. The warm weather that continued with but little respite from June 13th through July 28th was one of the longest and warmest periods in 85 years of record. There were 11 days with readings of 105° or higher. At the other extreme, Bakersfield reported a maximum reading of only 80° on the 5th, the lowest maximum ever recorded there in July. A number of the colder stations throughout the State reported minimums below freezing on one or more days.

Precipitation: Precipitation was light over the entire State. The South Coast Drainage and the Southeast Desert Basins reported the lightest July precipitation since 1949, and in the North Coast Drainage one needs to go back to 1953 to find a drier July. Of the past 36 months precipitation has been less than normal during 21 months in the Northeast Interior Basin, the figure increasing to 31 months in the South Coast Basin.

Storms: During the month there was considerable thunderstorm activity in the mountains, resulting in a number of lightning fires in timber- and rangeland. These fires caused concern because of the tinder dry conditions in most areas, but most of them were contained before they became of major proportions. One fire, however, burned the towns of Ahwahnee and Nipinnawassee, with a loss of two lives.

Lightning on the forenoon of the 12th in Orange County killed a fisherman at Redondo Beach and injured others nearby. There was some damage to utilities by the storm. In the northern part of the State on the same date thunderstorms damaged powerlines and small structures and injured two persons. A windstorm in the Coachella Valley on the 29th halted highway traffic temporarily.

C. Robert Elford
Weather Bureau State Climatologist
557 Federal Office Building
50 Fulton Street
San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 125° on the 11th+ at Death Valley.

Lowest Temperature 24° on the 30th+ at Portola.

Greatest Total Precipitation 1.40 inches at White Mountain 1.

Least Total Precipitation 0.00 at 318 stations.

Greatest One-day Precipitation 1.17 inches on the 12th at Grass Lake Highway Maintenance Station.

Greatest Total Snowfall 7.0 inches at White Mountain 2.

Deepest Snow on Ground Trace on the 24th+ at Mount Shasta Ski Bowl and on the 26th+ at White Mountain 2.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days, also seasonal precipitation, for the preceding 12 months are carried in the June issues of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table, became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those with Weather Bureau, Weather Bureau Airport, or Weather Bureau City in the station name, and also Beaumont 1 E and San Jose) are based on the period 1921 - 1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931 - 1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the "Seasonal Snowfall" Table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in the "Monthly Extremes"; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table, and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. (During the summer months some observers take the observations on daylight saving time.)

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA stations. For these stations snow on ground values are at 4:00 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST, and Mt. Shasta WB City at 8:00 a.m. PST.

In the Station Index the letters C, G, H, J, and S in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Weighing Rain Gage Recording Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.

G "Soil Temperature" Table.

H "Snowfall and Snow on Ground" Table.

J "Supplemental Data" Table.

S Storage Precipitation Station. Precipitation measurements, made at irregular intervals, will be published later in "Storage-Gage Precipitation Data" Bulletin.

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.

Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.

\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; "Daily Soil Temperature" Table; and the Station Index.

\+ And also on an earlier date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

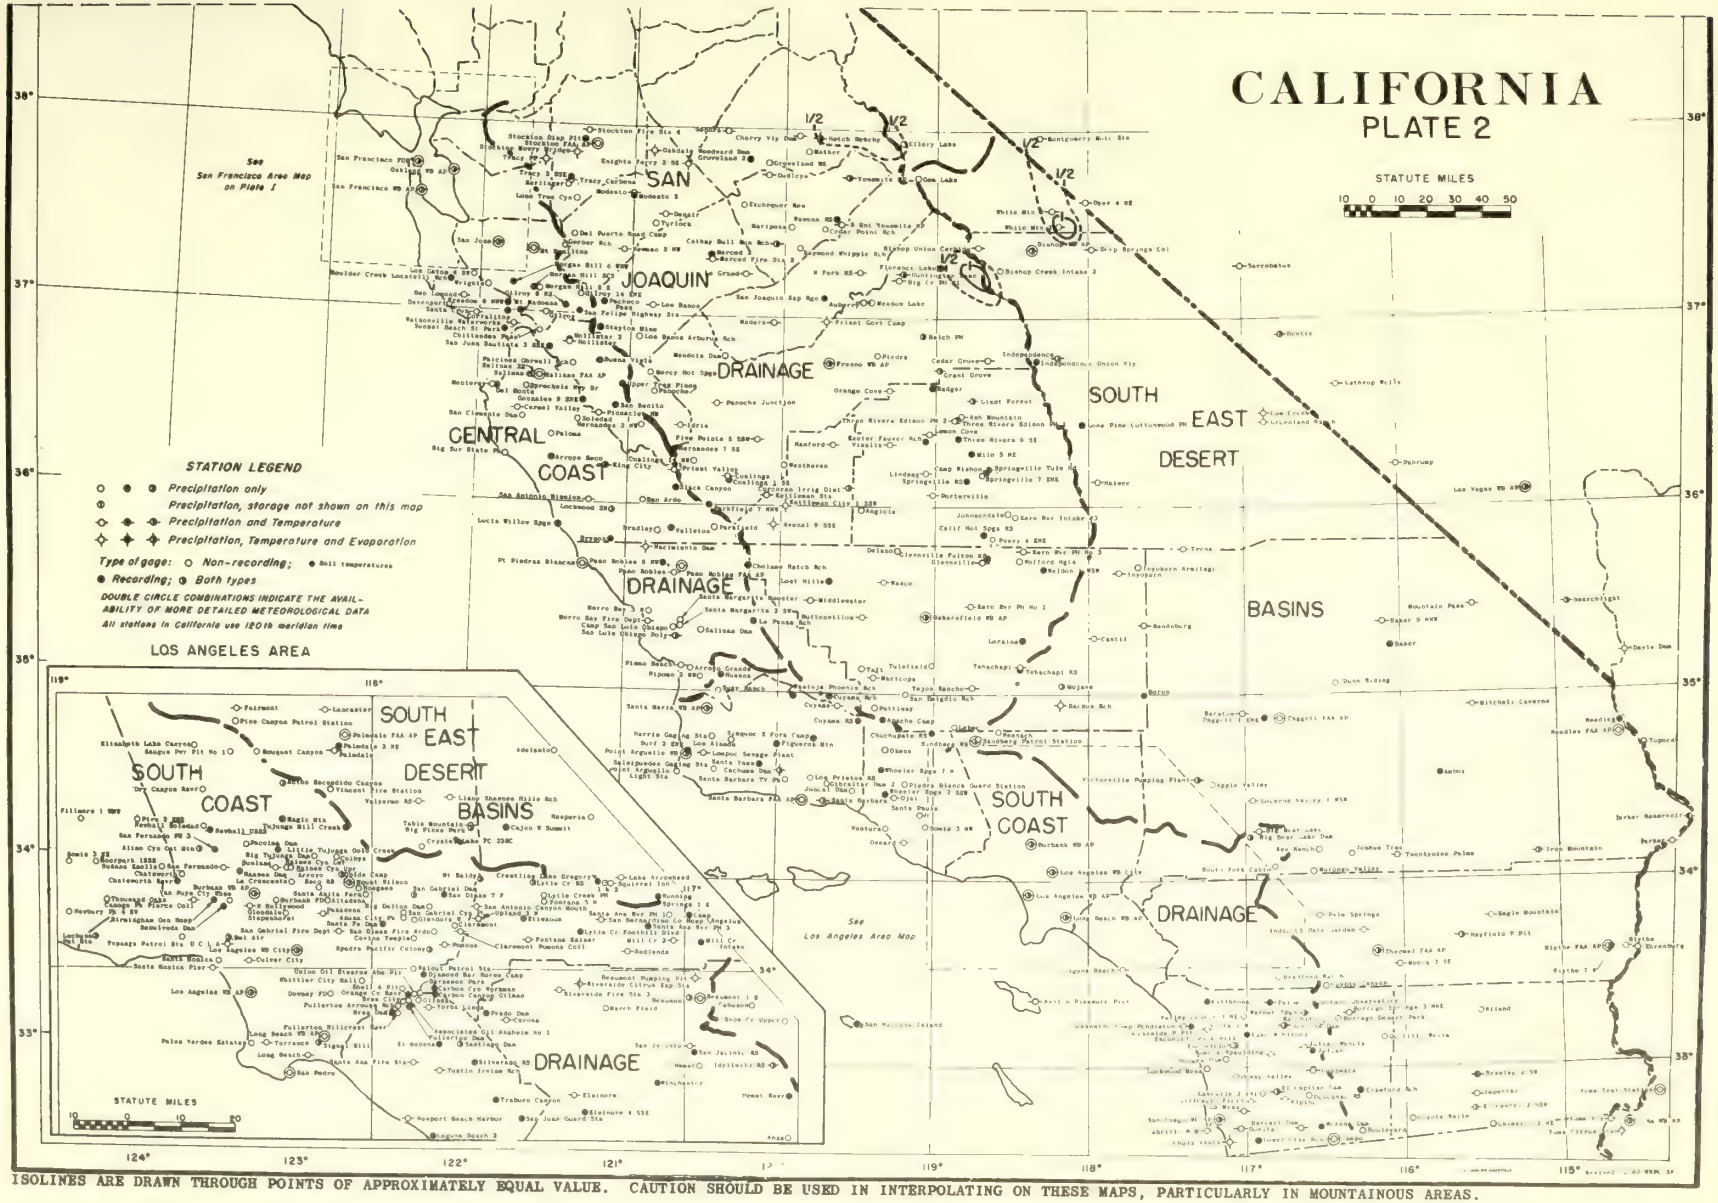
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.



VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA - NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1957 may be found in the publication SUBSTATION HISTORY for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D.C. for $1.25. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

AUGUST 1961
Volume 65 No. 8

ASHEVILLE: 1961

Temperature: For the third consecutive month temperatures averaged above normal in all parts of the State except the Southeast Desert Basins. For the area north of the Tehachapi Mountains this has been the warmest summer in recent years. At Red Bluff maximum temperatures averaged 103.3° for the 2-month period ending August 12. Minimums for the period August 3 to 13 averaged 73.4°, 8° above normal. Sacramento minimums set new high readings on the 6th, 7th, and 9th; the 76° on the 6th was the highest minimum ever observed in August. New maximum records were set at San Diego on the 4th, 5th, 7th, and 21st.

Precipitation: Rainfall for the month was above normal in all areas. This is the first month since last November that all parts of the State have been wetter than normal. In most divisions it is necessary to go back 8 to 10 years to find a wetter August, and in the Northeast Interior Basins and in the San Joaquin Drainage this month had more rainfall than any August since division averages were first computed in 1948. Fresno reported the heaviest August rainfall in the past 41 years. Los Angeles reported the second greatest Augu precipitation total of record, and the rainfa at Burbank on the 11th was the third heavie August rainstorm in their records.

Storms: There were many thunderstorms du ing the month, distributed rather uniform throughout the period. Many forest fires we started by lightning, although most of them we controlled while they were still small. Win rain, and lightning associated with the stor were responsible for damage to utilities, buil ings, and highways. No deaths were attribut directly to the storms, however. Some of t periods of more concentrated storm activi were 3d to 5th in southern California, 6th 7th north coastal mountains and Sierras, 11 to 13th all of the State, 17th to 19th southe California, and the 23d in the Mojave area.

San Francisco 2, California

MONTHLY EXTREMES

Highest Temperature 118° on the 22d+ at Death Valley.

Lowest Temperature 26° on the 26th at Portola.

Greatest Total Precipitation 4.55 inches at Mono Lake.

Least Total Precipitation 0.00 at 49 stations.

Greatest One-day Precipitation 2.78 inches on the 8th at Boca.

Greatest Total Snowfall 1.0 inch at White Mountain 2.

Deepest Snow on Ground Trace on the 11th at White Mountain 2.
